Hansgrohe Cleaning Recommendation

Today, modern sanitary and kitchen tapware, showers, accessories, washbasins, tubs and radiators consist of very different materials to comply with the needs of the market with regard to design and functionality.

To avoid damage and claims, it is necessary to consider certain criteria when cleaning.

With regard to cleaning Hansgrohe products, the following points must be observed:

- Only use cleaning material which is explicitly provided for this type of application.
- Never use cleaning materials, which contain hydrochloric acid, formic acid, chlorine bleaching lye or acetic acid, as they cause considerable damage.
- Phosphorus acidic cleaners are only applicable under certain conditions.
- Mixing different cleaning agents is generally not permitted.
- Never use cleaning materials or appliances with an abrasive effect, such as unsuitable cleaning powders, sponge pads or micro fibre cloths.
- The instructions of the cleaning agent manufacturers have to be followed closely.
- Cleaning has to be carried out with a specified dosage of cleaning detergent, for a suitable limited time, object-related and adapted to the needs.
- Limescale has to be removed by regularly cleaning.
- When using spray cleaners, spray the cleaning solution onto a soft cloth or sponge, never directly onto the Hansgrohe products, as the atomised spray could enter openings and gaps in the product and cause damage.
- After cleaning, rinse thoroughly with clean water to remove any cleaner residue.
- The use of steam cleaners is not permitted. The high temperatures can damage the products.

Important

Residues of toiletries such as liquid soaps, shampoos and shower gels, hair dyes, perfumes, aftershave and nail varnish can also cause damage.

Components with damaged surfaces must be exchanged otherwise there could be a risk of injury. Damage caused by improper treatment is not covered by our guarantee.

QuickClean

Removes lime scale deposits simply by rubbing the flexible silicone nubs.
